## **Max Calf Starter RUM**

### **Complete Calf Starter Feed**

#### **Medicated**

Max Calf Starter RUM is a complete feed for starting calves. Each pound of Max Calf Starter RUM contains **xxx** mg of monensin.

### **Feeding Instructions**

#### **FOR CONTROL OF COCCIDIOSIS:**

Feed to calves to provide between 0.14-1.0 mg of monensin per lb of body weight per day with a maximum of 200 mg of monensin per head per day depending on the severity of the challenge.

#### **WARNING**

A withdrawal time has not been established for this product in pre-ruminating calves. Do not use in calves to be processed for veal.

#### **CAUTION**

Do not allow horses or other equines access to feed containing monensin. Ingestion of monensin by equines has been fatal. Monensin-medicated cattle and goat feeds are safe for use in cattle and goats only. Consumption by unapproved species may result in toxic reactions. Do not exceed the levels of monensin recommended in the feeding directions, as reduced average daily gains may result. If feed refusals containing monensin are fed to other groups of cattle, the concentration of monensin in the refusals and amount of refusals fed should be taken into consideration to prevent monensin overdosing.
